

Bug Title: The calculated table values do not change accordingly if the page is translated

Steps to Reproduce:

1. Navigate to the online Home Savings Calculator
2. Choose Classic building savings
3. Choose either monthly, yearly, or one-time
4. Translate the webpage in Chrome to some other language than German (for example, English) and then drag the savings contribution slider to test different savings contribution amounts.

Expected Result:

- The calculated table should update the calculated values accordingly based on the savings contribution amount entered as is the case in the German version.

Actual Result:

- The values in the calculated table remain the same as the last values before the page was translated no matter what amount is entered for the savings contribution. See screenshots below:
